

NOTE IMPORTANTI PER CHI USA IL SISTEMA OPERATIVO VISTA

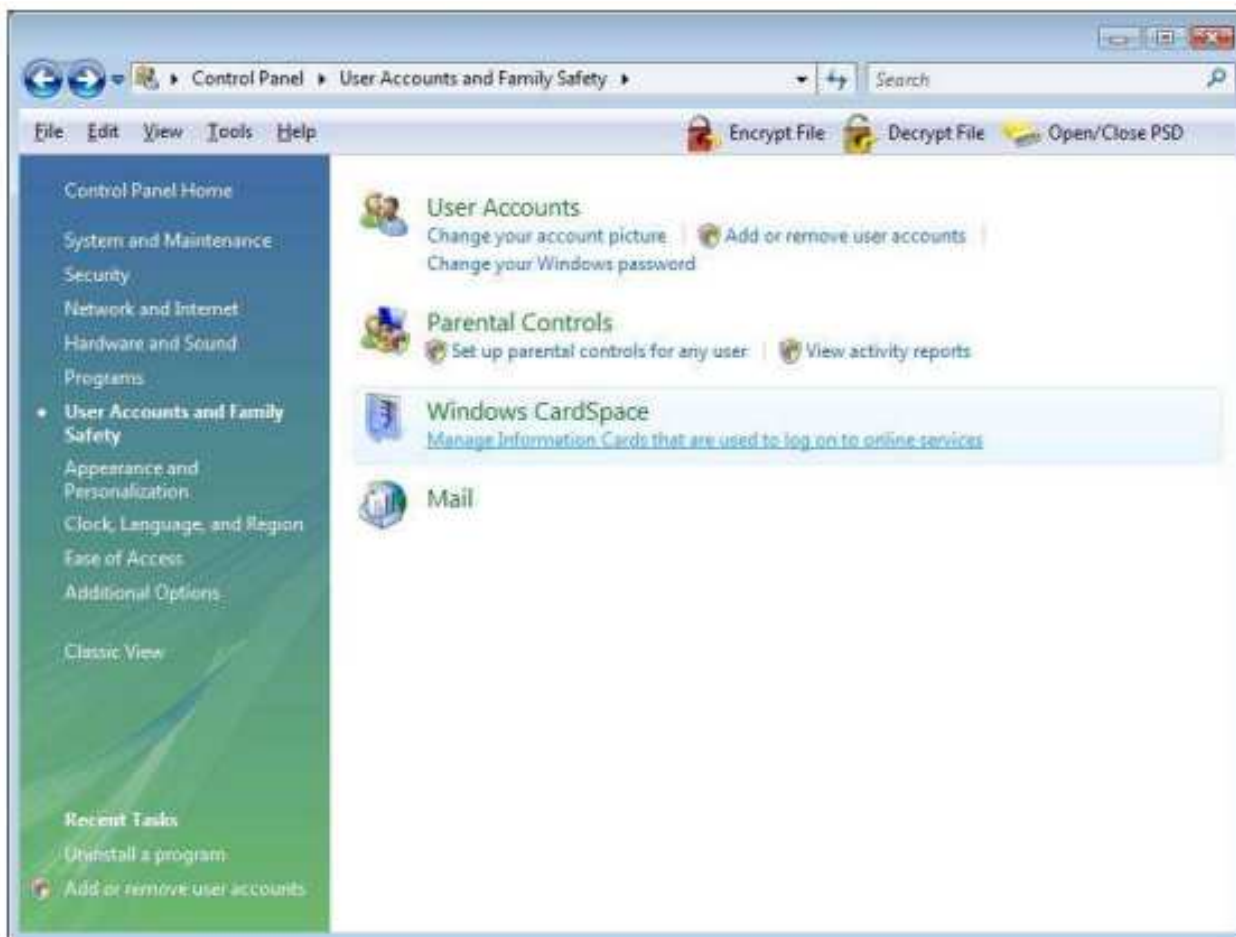

Prima di installare Mysql su computer che utilizzano Vista come sistema operativo occorre provvedere alle seguenti modifiche :

Note for Vista Users

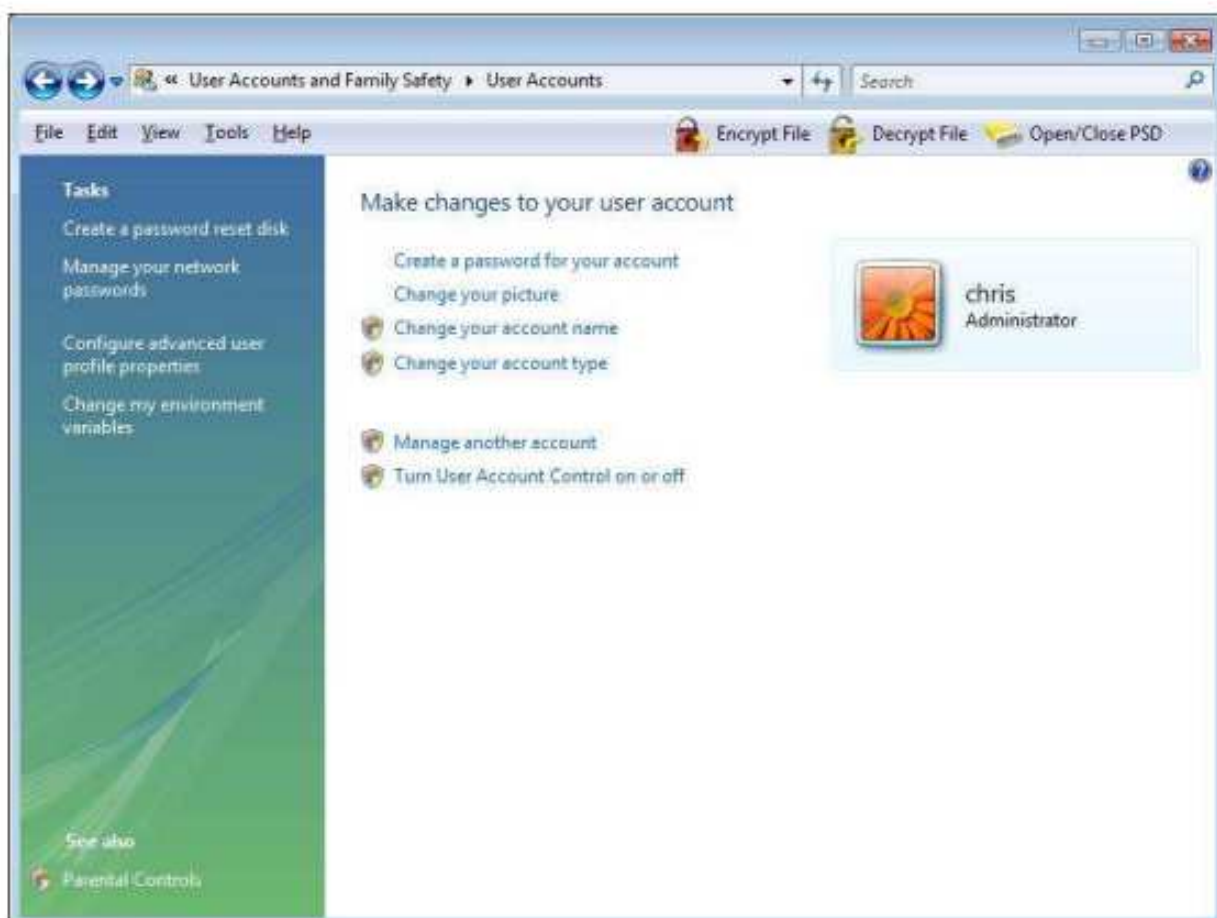

The MySQL installation requires that User Account Control (UAC) is disabled. If you do not do this, the installation will fail when the system tries to start the service, even if the user allows the change. To disable UAC, go to the Control Panel:

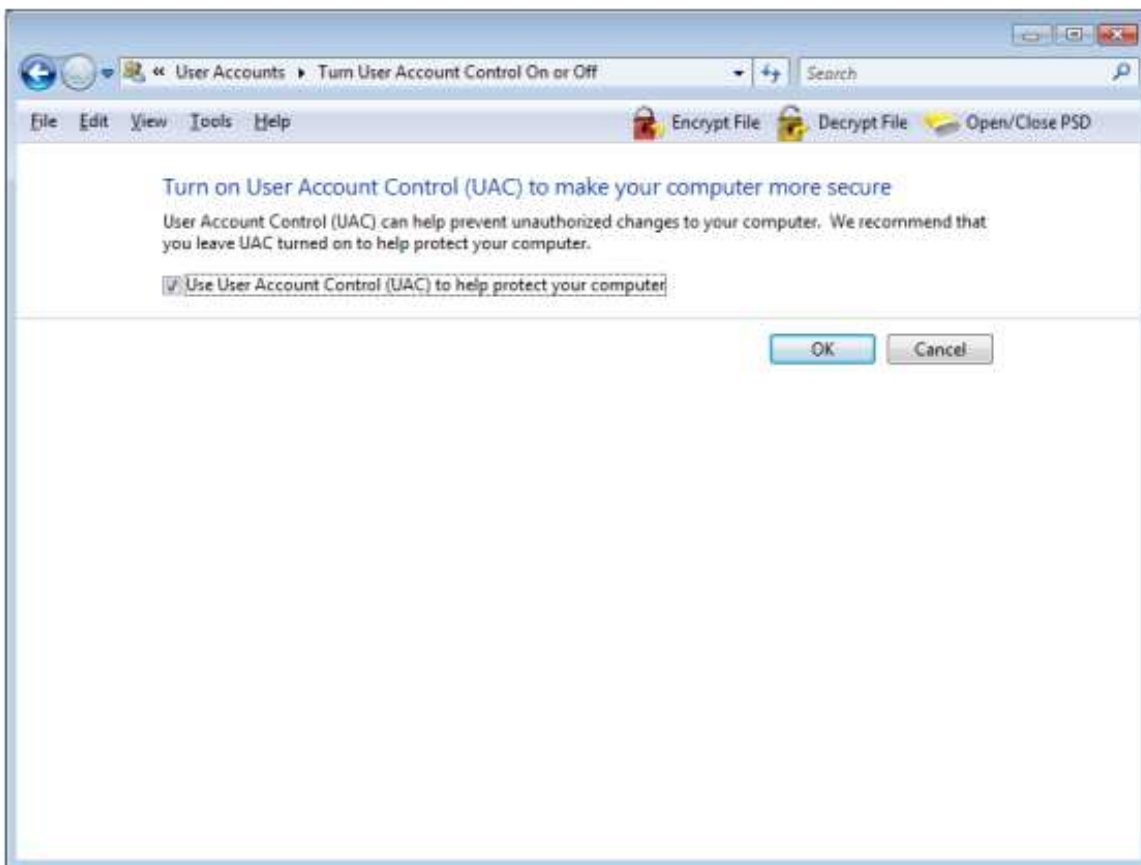

Select **User Accounts and Family Safety**. This brings up the next screen:

From here, click **User Accounts**. This will bring up the following screen:

Select **Turn User Account Control on or off**. If User Account Control is enabled, it will pop up with a dialog asking for permission to continue. Click **Continue** and the User Account Control screen will appear:

Uncheck the box and click **OK**. You will need to restart your computer for the change to effect.

Once you have finished the installation, you can re-enable UAC and the software will run without issue.

Vista non è perfettamente compatibile con Mysql nella versione utilizzata per VoIT : su alcuni computer Mysql non ha mostrato alcun problema di funzionamento, su altri invece si sono verificati problemi che ne hanno impedito l'utilizzo.

Qualora si abbia un PC con Vista, suggeriamo comunque di effettuare un test di caricamento e, in caso di esito insoddisfacente, installare il software su un computer con XP (home o professional).
